Yaseen Omar Zaqut

Flutter Developer & Trainer

yz456359@gmail.com — +970599380625 — Gaza, Palestine
github.com/YaseenOmar — linkedin.com/in/inYaseenOmar

Professional Summary

Flutter Developer and Trainer with 4+ years of experience in mobile application development and technical mentoring. Experienced in building scalable cross-platform applications using Flutter, Dart, Clean Architecture, Cubit, REST APIs, and Firebase. Experienced in delivering Java and Flutter training programs, supervising training and incubation initiatives, mentoring junior developers, conducting practical coding sessions, and guiding learners through real-world projects. Passionate about simplifying complex technical concepts and helping developers build clean, maintainable, and production-ready applications.

Teaching & Mentoring Experience

Flutter Trainer & Technical Supervisor **14/09/2026 – 09/11/2026**
Ajyal Training & Incubation Program
In Partnership with the Palestinian NGO Network (PNGO), Funded by UNDP

- Delivered technical training and coaching in Flutter and mobile application development as part of a structured training and incubation program.
- Supervised and guided 17 trainees through the development of team-based mobile application projects, from initial ideas to working prototypes.
- Provided technical guidance in Dart, Flutter, state management, REST API integration, and software architecture.
- Supported teams throughout the project incubation process, including idea development, project planning, task distribution, and implementation.
- Guided trainees in collaborative software development practices using Git and GitHub.
- Conducted technical evaluations, project reviews, and discussions to assess progress and provide actionable feedback.
- Mentored trainees in problem-solving, teamwork, communication, and professional software development practices.

Flutter Trainer **Present**
Code Nest

- Deliver structured Flutter training sessions covering Dart fundamentals, Flutter development, and cross-platform mobile application development.
- Teach practical concepts including Object-Oriented Programming, widgets, layouts, navigation, state management, REST API integration, and application architecture.
- Guide trainees through hands-on exercises and real-world Flutter projects.
- Support students in debugging, problem solving, and writing clean and maintainable code.
- Conduct code reviews and provide technical feedback to improve trainees' software development practices.
- Explain software engineering concepts in a practical and simplified way suitable for beginners and junior developers.

Flutter Mentor & Trainer

- Mentored junior developers in Flutter fundamentals and application architecture.
- Simplified complex concepts such as state management, Cubit, MVVM, and Clean Architecture.
- Assisted learners in debugging applications and identifying technical issues.
- Guided students in building real-world Flutter applications.
- Provided technical feedback and code reviews to improve code quality and development practices.

Professional Experience

Mobile App Developer **04/2025 – 12/2025**
The Chance

- Contributed to the development and successful launch of 5+ mobile applications.
- Reduced post-release bugs by 30% through improved testing practices and unit testing.
- Improved code maintainability and reduced developer onboarding time by 40% through Clean Architecture and better code organization.
- Collaborated with developers to implement scalable and maintainable mobile application features.
- Participated in debugging, code reviews, feature development, and application improvements.

Selected Projects

EV Charging Calculator *Flutter*

Google Play

Electric vehicle charging calculator that estimates charging time, added energy, and charging cost based on vehicle type, charging mode, battery status, temperature, and electricity pricing.

- Refactored and reorganized an AI-generated codebase into a scalable Clean Architecture structure.
- Added production-ready features including Google Sign-In, Apple Sign-In, and Firebase cloud storage.
- Published and managed application releases on Google Play Store and Apple App Store.
- Improved maintainability using feature-based modular architecture and separation of concerns.
- Enhanced charging calculation accuracy by handling charging type, temperature, battery status, and electricity pricing factors.
- Improved application performance and user experience through code cleanup and architecture optimization.

Sellio *Flutter – In Progress*

All-in-one multi-vendor e-commerce platform with customer, seller, and administrative applications.

- Developed Flutter applications using Cubit, Dio, and reusable components.
- Worked on a multi-vendor marketplace architecture.
- Implemented store and product management features.
- Contributed to AI-powered product mockup functionality.
- Worked with a Flutter monorepo structure and shared packages.

AWJ – POS & Retail Management System *Flutter*

Landing Page

- Developed a mobile point-of-sale system for managing products, invoices, and cart operations.
- Implemented barcode scanning and product management workflows.
- Designed reusable components for cart and transaction management.
- Worked on invoice and sales transaction workflows.
- Built the application with a focus on maintainability, usability, and scalable architecture.

Technical Skills

Mobile Development	Flutter, Dart, Android, Kotlin, Jetpack Compose
State Management	Cubit, BLoC
Architecture	Clean Architecture, MVVM, MVC, Feature-Based Architecture
Networking	REST APIs, Dio, HTTP, JSON, API Integration
Backend Services	Firebase Authentication, Firestore, Firebase Storage
Local Storage	SQLite, Room, SharedPreferences
Testing	Unit Testing, Widget Testing, Debugging
DevOps	Git, GitHub, GitHub Actions, CI/CD
Development Tools	Android Studio, VS Code, Postman, Figma
Other	Monorepo, Melos, Responsive UI, Code Review

Education

Bachelor's Degree in Network and Mobile Technology **2023**

Al-Aqsa University – Gaza

Languages

Arabic	Native
English	Good
